

CleanPro User Guide

CleanPro is a modern data cleaning tool for React and Vite users.

It lets you:

- Upload local datasets in CSV, Excel, JSON, or YAML format
- Connect to database sources such as AWS Redshift, Azure Synapse, Snowflake, Google BigQuery, PostgreSQL
- Preview query results before importing data for cleaning
- Apply configurable cleanup rules for nulls, blanks, zeros, and duplicates
- Download cleaned CSV output

What the App Does:

CleanPro guides users through a simple data preparation workflow:

1. Select a data source: local file upload or database connector
2. Preview the dataset in the app
3. Configure cleaning rules for nulls, blank strings, zero values, and duplicates
4. Apply cleaning and review the output
5. Download the cleaned dataset as CSV

Screenshots:

Before and after screenshots are included to show the initial source selection and connector configuration states.

How to Use:

1. Start the app with ``npm run dev``
2. Open ``http://localhost:3000``
3. Choose ``Upload Files`` to load local CSV, Excel, JSON, or YAML files
4. Or choose a connector like ``Google BigQuery`` to configure database import
5. Use the cleaning rules panel to choose how to handle:
 - Null values
 - Blank strings
 - Zero values
 - Duplicates
6. Click the clean action, then download the cleaned CSV

Notes:

- The app supports multiple input formats and connector preview workflows.
- The guide images show the initial source selection screen and the connector setup flow.
- docs/CleanPro-User-Guide.pdf contains the same guide with embedded images for easy sharing.

Before screenshot

**DATA SOURCE****Choose where your data comes from**

Select either a local file upload or a database connector. The screen will update with the guided next step for your source.

DATA SOURCEUpload Files 

Upload local CSV, Excel, JSON, or YAML files. The upload form will appear below once you select this source.

**Upload files locally**

Select or drag files to add them as datasets. Once uploaded, you can clean them using the same workflow.

 Upload Files / Folder**No dataset loaded yet**

Upload CSV, Excel, JSON or YAML files to start cleaning your data. You can select multiple files or drag them here.

 Choose Files or Folder

After screenshot

CleanSheet

Selected source: Google BigQuery

Import local files or connect to databases, preview datasets, and clean them in one workflow.

Source menu available below

DATA SOURCE

Choose where your data comes from

Select either a local file upload or a database connector. The screen will update with the guided next steps.

NEXT STEPS

Set up Google BigQuery

Follow these guided steps to import your dataset from the selected connector.

1. Enter **connection details** for Google BigQuery in the form below.
2. **Paste or update** the SQL query to fetch the data you need.
3. **Preview query results** and then import the dataset for cleaning.

Continue to connector

Configure your connector

Enter the connection details and SQL query for the selected source. A popup guides you through the next steps.
